## Excellent global performance on difficult-to-tag materials

AD Dogbone® M780 inlays from Avery Dennison are designed for global supply chain, industrial, RTI, and sports timing applications. They excel through superior performance in demanding environments and on difficult-to-tag materials, due to their good tolerance against the detuning effect of high dielectric materials.

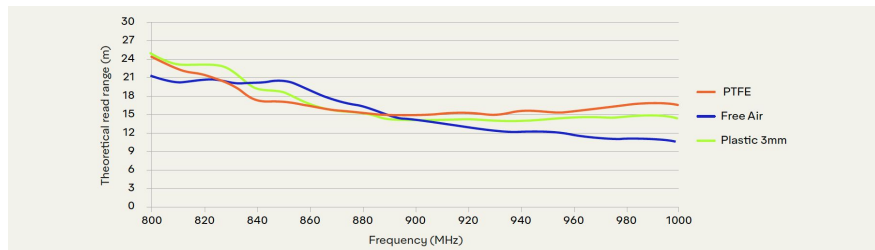

The product is equipped with the M780 IC from Impinj. The IC comes with 496-bit EPC memory and 128-bit User memory, and offers an enhanced “autotune” adaptive RF tuning feature. In addition, the IC has an improved read and write sensitivity, enabling faster and more accurate bulk reading compared to Impinj Monza 4. The M780 IC is compatible with the global GS1 UHF Gen2v2 standard and has a privacy mode that enables loss prevention and protects consumer privacy. Dogbone® M780 inlays have a size of 97 x 27 mm, which is optimized for 100 mm / 3.94 inch wide converted labels, and are available in dry, wet, and paper tag delivery formats.

Like all RFID products from Avery Dennison, AD Dogbone® M780 inlays are manufactured according to the industry's highest quality standards, as confirmed by the RFID Lab at Auburn University: The inspection body awarded Avery Dennison its first comprehensive and significant ARC accreditation for quality.
